

Due to the favorable characteristics of application , Alumina components include high purity (over 90% ) are one of the best known and widely used kind of industrial ceramic . These are used not only as electrical insulation but also due to abrasion resistance and corrosion resistance properties .

The most Alumina components used in industry include :

- Alumina Ceramic Ferrule types
- Seal ring types
- Types of Electrical Insulation and Thermocouple
- Igniter types
- Nozzle types
- Reosta types
- Stress Relieving Beads
- Alumina Ceramic Liner
- Ceramic Membrane
